**DETAILED ACTION**

***Response to Amendment***

1. The remarks and amendment filed 10/13/2006 are entered and fully considered.
2. Claims 1-3 are presented.
  - a. Claims 1-3 are amended.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by Lille, U.S. Patent No. 6,725,526 B2.

Lille teaches a suspension assembly with a base, formed from silicon wafer (stiffener layer), a sacrificial layer (cushion layer), which is less stiff than the silicon wafer and subsequently formed over the silicon wafer. The silicon wafer may include silicon rubber. The assembly may also include a photoresist layer comprising elastomeric polydimethylsiloxane (transfer layer).

***Response to Arguments***

5. Applicant's arguments filed 10/13/2006 have been fully considered but they are not persuasive.
6. Applicant argues that the Lillie reference teaches a photoresist that is patterned *in situ*. Further, that the Lillie reference does not teach or suggest the use of a pad with a layer of polydimethylsiloxane to apply liquid photoresist to a surface.
7. Applicant is directed to column 2, lines 38-46 wherein Lillie one embodiment comprising forming a suspension assembly with a sacrificial layer formed over a substrate, a transfer film layer and a photoresist layer. Column 4, line 27 shows that the substrate is a silicon wafer. Further, Lillie teaches that a transfer film layer of polydimethylsiloxane (PDMS) is formed on the substrate (column 4, line 58-61). This structure meets the limitations of applicant's instant invention as claimed. The amendment of claims 1-3 do not add any positive limitations to the claims. The addition of the limitation of the transfer layer, "for receiving a coating of photoresist in liquid form and applying the coating of photoresist in liquid form to a surface" is a process limitation. Applicant only claims a product (a pad) in instant claims 1-3. In addition, whether the patterned photoresist is formed *in situ* or not is not relevant to the product claims recited in applicant's invention. Therefore, the rejection is maintained.

***Conclusion***

8. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
